

Milestone

Technical Configuration Level 1

The Milestone Technical Configuration Level 1 is a three-day training workshop designed to develop participants' ability to install and configure moderately complex XProtect® Advanced VMS installations, with the guidance of a professional facilitator.

This training workshop consists of a series of hands-on exercises that build on each other to configure the XProtect® Corporate VMS to specifications from realistic scenarios. Step-by-step instructions guide the learner as they configure systems according to sample specs in a more independent environment.

Target Audience:

Field technicians who are responsible for installing and configuring video surveillance systems are encouraged to attend this workshop.

Prerequisites:

To be successful in this course, you should first complete the following free eLearning courses:

1. Milestone Fundamentals of IP Surveillance Systems
2. Getting Started with XProtect Professional
3. Getting Started with XProtect Smart Client

You can access these free eLearning courses by logging onto the [Partner Learning Portal](#).

This class helps prepare learners to take the Milestone Certified Integration Technician (MCIT) online assessment, which meets requirements outlined in our Channel Partner Program. More information can be found [here](#).

Content Areas Covered:

- Configure the Network and Server
- Install Milestone XProtect Advanced Components
- Configure the Recording and Storage Settings
